# America's Easiest and Most Versatile Storefront Estimating Software Since 1985

Subscribe to the incredibly affordable WinBidPro v15 System and you'll have all you need to create professional bids in the shortest possible time!

## No Glass Shop should be without it!

- Intuitive design allows expert and novice estimators to create fast and accurate quotes. Simply enter the job information, build your elevations and print the reports.

- Install catalogs from the vast selection of architectural metal manufacturers (*vendors*) available on our web site. Get catalogs from fellow glaziers, or even create your own custom catalog. Transfer jobs from one vendor to another for easy price comparisons.

- Catalogs are updated with changes and additions provided by the various manufacturer. You also have full control over every catalog you use, and can easily edit and add to all information provided.

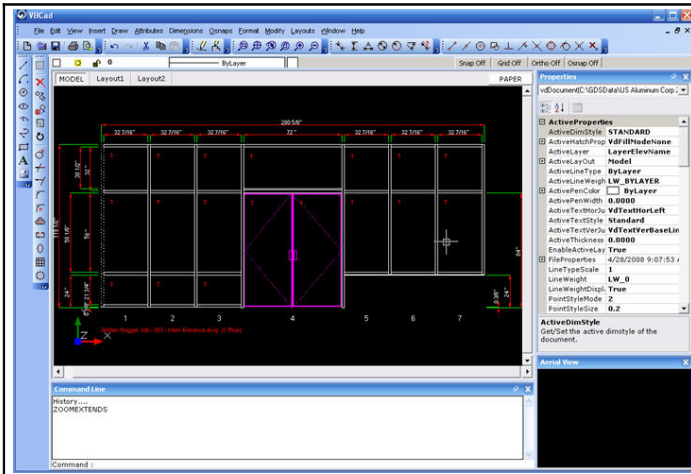

Build elevations with our simple interface.

- Create elevations by selecting preconfigured framing systems from each vendor catalog. Easily adjust pricing by applying discount multipliers to a vendor's list pricing.

- Easily add components to a drawing by following simple on-screen instructions. For example, add equally spaced horizontals just by entering the number of rows.

- Modify framing, door, and door frame parts for individual elevations on the fly. Easily change frame types, and finish colors to compare pricing on any given job.

- Add or edit glass by simply clicking on a desired lite, row, or the entire elevation.

## Flexibility to complete the job.

- A powerful stock material optimizer lets you check and modify cut pieces before the job is optimized.

- Quickly edit, view, or print parts in an easy to read spreadsheet style format.

- Adjust part quantities, unit prices, and multipliers to complete the job.

- Get accurate glass sizes based on the elevations you have drawn. Then print glass summary reports with square footage and cost pricing.

- Print an optimized cut list for the shop to use when cutting material. You can even print labels to place on the cut pieces of both glass and metal.

- Print reports with or without pricing for easy price quote submittals.

CAD tool for details and drawings.

- Details drawings are preconfigured for many manufacturers. The included CAD program allows you to view and print these details at the click of a button.

- This built-in program will let you open and modify any DXF or DWG drawing file.

- Detail reference labels can be added to your elevation drawings which help associate a detail drawing to a frame member.

- What if you already have a CAD program? You can set WinBidPro to open drawings in your own CAD software instead of the included CAD program.

Flexible Printing and Exporting!

- The Shop Drawing feature not only creates DWG or DXF files, it will let you combine elevations at a specified scale and paper size for easy printing.

- Export drawings and reports to PDF files for easy email attachment.

- Export cut parts to TigerStop automated saw stops.

- Export most reports to Microsoft Excel files.

- Export material and glass reports to GTS GlasPacLX Software for Job Costing and full Project Management.

Try Before You Buy!

- The best way to buy new software is to actually *use* it before paying for it. If you try the actual program you want to buy, and make sure it does what you want, then you have made a confident and educated decision.

- Download the full program from the GDS web site, or install it from a current CDROM, and you will get 30-days of FREE use! Install any of the 15 different manufacturer catalogs and create your own estimates.

- Make sure you watch our training videos and browse the help documentation to quickly learn different parts of the program.

- Check our web site for information on training services from our authorized training partner.
