GDS Storefront Estimating WinBidPro v15 Installation

Published and sold by GDS Storefront Estimating, a division of Infinitive Solutions, LLC.

Installation:
After installing the WinBidPro software, you will need to install vendor catalogs in order to create estimates with this program. You can download catalogs from www.gdsestimating.com. NOTE: There is no expressed or implied warranty or guarantee for the accuracy of the information provided by GDS, or generated from the WinBidPro software. It is the user's responsibility to check and re-check the information produced by the WinBidPro software.

Many catalogs created for the WinBidPro system are not verified by the manufacturers which they represent. GDS makes every effort to maintain these catalogs and provide updates in a timely matter. However, this process is largely affected by the information that we receive from the manufacturers themselves.

The WinBidPro system is capable of working with information from any manufacturer, and in many cases our users will create their own catalogs by entering information unique to their business. This flexibility is an important part of the WinBidPro software, but as a result, requires you the user to ensure that the information you are using is correct for the application you are using it for. Familiarity with all aspects of the program will allow you to adjust the program to different situations that arise for different jobs. These proficiencies will pay dividends in saving you time and producing accurate bids.

Check for Updates:
It is a good idea to periodically check our web site at www.winbidpro.com, for updates to catalogs and the WinBidPro software itself. Many manufacturers will change their pricing once a year, while some do this more often. The WinBidPro software will be continually updated as we strive to improve on what it will already do for you. We always recommend that you install any update that we release for the WinBidPro software. There will always be improvements in these updates in the form of either bug fixes, updates, or both.
